1. Introduction

Bangladesh has emerged as a powerful garment manufacturing country and now is the second largest ready-made garment exporter in the world, has emerged as a key player since 1978. Textiles & Clothing account for about 85% of the total export of Bangladesh. Out of which 86% comes from the apparel sector which covers the major products of knit & woven shirts, blouses, trousers, skirts, shorts, sweaters, sportswear & many more casual & fashion items (Hasan, Mia, Rahman, Ullah, & Ullah, 2016). Bangladesh's main export partners are the European Union, North America and Emerging countries in Asia, South America and Africa(Comtrade, 2018). Textile & clothes, raw jute, and its derived products, leather, fish and frozen seafood are the main export products of Bangladesh (Comtrade, 2018).

In 2017, Bangladesh exported goods worth US \$ 1.1 billion to Canada, more than 95 percent of which was readymade garment item. The total two-way trade between the two countries was worth the US \$ 1.87 billion in 2017. Of the total export to Canada from Bangladesh, the majority of products are clothing items, as this North American country has been giving duty-free trade benefit for all goods to Bangladesh since 2004. Garment shipment to the US, the country's single largest export destination, declined 7.47 percent year-on-year to \$5.2 billion in 2016-17 largely because of higher duty, longer lead-time, and lower prices (Today, 2017).

In 2017, top import partners of Canada in readymade garments were China (39%), followed by Bangladesh (12%) (See Appendix 1). On the other hand, top import partners of USA in readymade garments in 2017 were China (34%), followed by Vietnam 14%) and Bangladesh accounted for 6% of USA's total import in readymade garments.

Bangladesh is now facing stringent competition from China, Vietnam, Cambodia, Indonesia, Italy, and India in their main export destinations European market and North American market (USA and Canada). In Fiscal Year (FY) 2017-2018, export of readymade garments (RMG) products registered an 8.76 percent growth reaching to \$30.61 billion. With the current product mix of Bangladesh RMG industry, when major export markets are reaching to almost saturation point, growing in non-traditional market diversification has become even more important (Today, 2018). The broadening of new export destinations is inevitable due to the entry of new competitors in traditional markets where Bangladesh has been enjoying an edge over others for many years. On the contrary market growth in traditionally is being restricted due to the economic slowdown and Bangladesh's lack of product diversity (Today, 2018). According to the chief of the Canada Bangladesh Chamber of Commerce and Industry (CanCham Bangladesh), Bangladesh aims to raise its exports of readymade garments (RMG) to Canada at least fivefold to \$3.5 billion by 2021. To sustain Bangladesh's RMG industry growth and survive the competition it's important to analyze the export growth and competition in those major markets. Therefore this study aims to analyze competition and export growth of Bangladesh readymade garments in the Canadian market compared with its nine other top competitors.

This study objective is to provide a picture of relative position of the competition of Bangladesh readymade garments and their export growth in the Canadian market where few types of research have been conducted before that illustrate the value of this research.

However, the objectives of this research are as following;

- i. To explore the overall status of the competition of RMG industry in the Canadian Market.
- ii. To investigate the export growth of Bangladesh's readymade garments industry in the Canadian market compared with its top competitors.
- iii. To discover Ad Valorem Equivalent (AVE) Tariff of Bangladesh's readymade garments industry in the Canadian market.
- iv. To advise a sustainable policies and actions for Bangladesh's readymade garments industry in Canadian market.

2. Literature Review

Since last two decades, the RMG industry of Bangladesh has been the main source of country's export growth (Ahmed, 2009). The competition of export causes economies of scale and acceleration of technological progress (Ramos, 2001). A nation could foster the economic growth by promoting exports of goods and services. An extremely competitive world market of RMG has put pressures on Bangladesh to improve the export competitiveness of country's export (Berik & Rodgers, 2009). In over three decades, Bangladesh has witnessed substantial growth in its export of goods and services. To reduce higher dependency on the traditional market and seize new export markets, government and private sector need for market diversification (Today, 2018).

Mamun and Nath (2005) investigated the link between exports and economic growth in Bangladesh by using time series evidence (Al Mamun & Nath*, 2005). Hossain, Dechun, Zhang, & Van (2017) examined the comparative advantage and competitiveness respectively for Textile and Apparel industry of Bangladesh and China by using Balassa revealed comparative advantage and Spearman Rank Correlation coefficient (rs) (Hossain, Dechun, Zhang, & Van).

Ramesh Kurpad, M. (2014) evaluated the challenges of the export growth of the ready-made garment (RMG) industry in Bangladesh, the economy's backbone, and suggested appropriate reform (Ramesh Kurpad, 2014). Bhattacharya (2002) stated that the growth of RMG exports of Bangladesh has undoubtedly positive effects on macroeconomic balances (Bhattacharya, Rahman, & Raihan, 2002). Bangladesh's export performance so far presents signs of strength in its export basket (Sattar, 2015). But the competitiveness issue needs to be addressed with special attention given to the long-term sustainability of the industry (Haider, 2007).

However, very few researches have been conducted on the Export Growth and Competition of Bangladesh's Readymade Garments industry in the Canadian Market, which motivated this research to be conducted.

3. Research Methods

This study objective is to provide a picture of relative position of the competition of Bangladesh readymade garments and their export growth in the Canadian market. After the review of academic literatures, the authors have selected growth analysis formula to find out the export growth of Bangladesh readymade garments in Canadian market in respect with 9 other countries and Spearman's Rank Correlation Coefficient (r_s) to measure the relative position of the competition of Bangladesh in respect with other major competitors (Zar, 1972).

Since HS61 and HS62 product groups represent most of the products of readymade garments industry, 34 products of HS 4 digits level from this two product groups have been chosen to analyze in this research. Export growth was calculated for all 34 product categories of four digits level Harmonized System product group HS61 and HS62 (see appendix 2) (HS). Ad Valorem Equivalent (AVE) Tariff of product group HS 61 & HS 62 was taken into account to find out the relative advantages of the studied countries in the Canadian market. For calculation, export data has been obtained from the ITC Trade Map and the United Nations Commodity Trade Database (Comtrade, 2018). Microsoft Excel program & SPSS was used for the calculation.

Growth Analysis

The computation formula of the growth rate over five years (2013-2017) is the following:

$$\left(\exp \left[\frac{\left(\sum_{i=1}^5 i \cdot \ln(v_i) \right) - 3 \cdot \sum_{i=1}^5 \ln(v_i)}{10} \right] - 1 \right) * 100$$

.....(i)

Where V_i is the value of the i -th year in current US dollar.

Indeed:

$n=5$

$\text{sum } x_i = 1 + 2 + 3 + 4 + 5 = 15$

$av = \ln(v_1) + 2 \cdot \ln(v_2) + 3 \cdot \ln(v_3) + 4 \cdot \ln(v_4) + 5 \cdot \ln(v_5)$

$\text{sum } \ln y_{iv} = \ln(v_1) + \ln(v_2) + \ln(v_3) + \ln(v_4) + \ln(v_5)$

$cv = (\text{sum } x_i / n) \cdot \text{sum } \ln y_{iv}$

$bv = (av - cv) / 10$

$\text{trend } v = (\exp(bv) - 1) * 100$

If an intermediate value (other than v_1 or v_5) is missing or equals 0 while the country has reported its data then this value is set to 1.

If the oldest year (v_1) has not been reported by the country then a four-year growth rate is computed according to the same logic. If the most recent year (v_5) has not been reported by the country then the five-year growth rate is computed based on mirror statistics (for the five years).

To calculate the five-year rate of growth for the world it is necessary that all countries have data for each of the five years under consideration. In the case of countries included in this aggregate that reported only the last four years, the data for that first year is calculated using the following formula:

$$V_1 = \frac{V_2}{1 + \frac{trendv}{100}} \quad \text{if } trendv \geq 0; v_1 = v_2 \text{ otherwise}$$

This assessment is also used for the computation of growth rates of trade with the entire world of countries which did not report the most recent year.

The five-year growth rate is not displayed if the country's data are not available (with direct or mirror data) for the last five years. The five-year growth rates of the world trade as a whole as well as the growth rates of the trade with the entire world of the countries which did not report the most recent year are computed based on the available five-year series only (with an assessment of the oldest year if necessary, see computation method above). These rates are displayed only if values of the most recent year retained for the computation of the five-year growth rate (see method above) represent at least 50% of the total value of the most recent year (i.e. all partner countries taken together).

Ad valorem equivalent (AVE) tariffs are calculated using the World Tariff Profile (WTP) methodology. At the HS4 level, tariffs aggregations are calculated using the country's Reference group imports as weights. Data is retrieved from the ITC Market Access Map database.

Furthermore, in order to avoid the double counting of values, the computation of the five-year growth rate for the world as a whole does not include the trade with the "special categories" and the "Area not elsewhere specified".

Ad Valorem Equivalent (AVE) Tariff

An AVE is a tariff presented as a percentage of the value of goods cleared through customs. It is the equivalent of a corresponding specific tariff measure based on unit quantities such as weight, number or volume. There are several

methodologies for calculating AVEs. The method chosen depends on the intended application of the data. Most important to the process of calculating an AVE is the way the Unit Value of the product is calculated. The unit value is the value of each unit quantity imported of a product. It is based on the total value of imports of that product divided by the number of imports (Stawowy, 2001).

All non-ad valorem (NAV) applied tariffs are converted to ad valorem equivalents (AVEs) by dividing the specific element of the NAV tariff, expressed as an amount per unit, by the value of the product per unit. In order to achieve a percentage value, the result is multiplied by 100. Thus, the general formula to calculate AVEs is the following:

$$t_{AVE} = t_{NAV} / UV * 100 \dots\dots\dots(ii)$$

Where,

t_{AVE} the ad valorem equivalent tariff per unit; t_{NAV} the non-ad valorem equivalent tariff per unit

UV the value of the product per unit, or unit value (UV)

In order to develop a meaningful result, this research used statistical techniques. A numerical approach is appropriate for this study to control biases, decrease errors, and conduct the analysis (Schmidt & Hunter, 2014).

However, the 2-letter codes of country names have been used according to the ISO (International Organization for Standardization) (worldatlas) eg; China (CN), Vietnam (VT), India (IN), Bangladesh (BD), Mexico (MX), Indonesia (ID), Pakistan (PK), Cambodia (KH), Italy (IT), and Sri Lanka (SL).

4. Data Analysis, Result, and Discussion:

Table 1 shows the export growth in the Canadian market during the period of (2013-2017) for the 17 product categories of four digits level Harmonized System (HS) product group 61 compared with 9 other countries. Out of 17 product categories Bangladesh has a positive export growth in 8 product categories (HS 6103, HS 6104, HS 6106, HS 6110, HS 6113, HS 6115, HS 6116, HS 6117) and rest 9 product categories (HS 6101, HS 6102, HS 6105, HS 6107, HS 6108, HS 6109, HS 6111, HS 6112, HS 6114) have a negative export growth in the Canadian market. HS 6115 (Pantyhose, tights, stockings, socks and other hosiery, incl) has the highest positive export growth (70) and HS 6112 (Track-suits, ski-suits, and swimwear, knitted or crocheted) has highest negative export growth (-20) for Bangladesh in Canadian market over the period of 2013-2017. The mean value shows that in the overall HS61 category Bangladesh have a positive growth of 4.35.

Italy has the highest mean value of 13.06 followed by Vietnam (11.47) and Cambodia (7.18). Bangladesh stands 5th based on the mean value.

Table 1: HS61 Export Growth in the Canadian Market (2013-2017)

Product Code	CN	VT	IN	BD	MX	ID	PK	KH	IT	SL

Table 2. The analyzed result of Spearman's rank correlation coefficient (r_s) of 17 product categories of HS61 between Bangladesh and 9 other countries based on their export growth value

Competitors	Value of (r_s)	Consequence
BD and CN	-0.26	Exhibit complementary
BD and VT	0.29	Exhibit Modest Competition
BD and IT	-0.14	Exhibit complementary
BD and IN	0.40	Exhibit Higher Competition
BD and MX	-0.05	Exhibit complementary
BD and IND	-0.10	Exhibit complementary
BD and PK	0.26	Exhibit Modest Competition
BD and KH	0.18	Exhibit Modest Competition
BD and SL	-0.29	Exhibit complementary

In Table 2, the degree and nature of competition between Bangladesh and 9 other countries based on market growth value by calculating the Spearman's Rank Correlation coefficients for Bangladesh and above mentioned countries in the Canadian market for the 17 product categories of HS61. As following, the SRC value ranged from 0.30-1 reveals the higher competition, SRC value ranged from 0.01-0.29 reveals modest competition, and SRC value = -1 reveals complementary between two nations for the 17 product categories of HS61.

The analyzed result of SRC (Table 2) of Bangladesh in respect with 9 other countries for 17 product categories of HS61 shows that higher competition exhibit with India. On the other hand, modest competition exhibit with Vietnam, Pakistan, and Cambodia. On the contrary, there exhibits complementariness in five remaining countries China, Italy, Mexico, Indonesia, and Sri Lanka.

Table 3: HS62 Export Growth in Canadian Market (2013-2017)

Product Code	CN	VT	IN	BD	MX	ID	PK	KH	IT	SL

HS 6217	8	33	-32	1	-39	-14	2	47	13	-29
Mean	-0.53	13.53	-1.35	-0.18	-1.82	8.29	0.35	7.53	1.24	-4.76
SD	9.06	16.56	19.17	13.26	30.00	20.15	16.61	24.68	19.45	18.83

Table 3 shows the export growth in Canadian market during the period of (2013-2017) for the 17 product categories of four digits level Harmonized System (HS) product group 62 compared with 9 other countries. Out of 17 product categories Bangladesh has a positive export growth in 9 product categories (HS 6202, HS 6203, HS 6204, HS 6205, HS 6206, HS 6210, HS 6211, HS 6214, and HS 6217), and 6 product categories (HS 6201, HS 6207, HS 6208, HS 6209, HS 6215, and HS 6216) have a negative export growth in Canadian market, and rest 2 (HS 6212, HS 6213) show no growth or “zero” growth. HS 6214 (Shawls, scarves, mufflers, mantillas, veils and similar articles) has the highest positive export growth (36) and HS 6216 (Gloves, mittens, and mitts, of all types of textile materials) has highest negative export growth (-24) for Bangladesh in Canadian market over the period of 2013-2017. The mean value shows that in the overall HS62 category Bangladesh have a negative growth of -0.18. Vietnam has the highest mean value of 13.53 followed by Indonesia (8.29) and Cambodia (7.53). Bangladesh stands 6th based on the mean value.

Table 4. The analyzed result of Spearman's rank correlation coefficient (r_s) of 17 products of HS62 between Bangladesh and 9 other countries based on their export growth value

Competitors	Value of (r_s)	Consequence
BD and CN	0.25	Exhibit Modest Competition
BD and VT	0.05	Exhibit Modest Competition
BD and IT	0.34	Exhibit Higher Competition
BD and IN	0.09	Exhibit Modest Competition
BD and MX	-0.32	Exhibit complementary
BD and IND	0.42	Exhibit Higher Competition
BD and PK	-0.04	Exhibit complementary
BD and KH	-0.08	Exhibit complementary
BD and SL	-0.29	Exhibit complementary

In Table 4, the degree and nature of competition between Bangladesh and 9 other countries based on market growth value by calculating the Spearman's Rank Correlation coefficients for Bangladesh and above mentioned countries in the Canadian market for the 17 product categories of HS62. As following, the SRC value ranged from 0.30-1 reveals the higher competition, SRC value ranged from 0.01-0.29 reveals modest competition, and SRC value = -1 reveals complementary between two nations for the 17 product categories of HS62.

The analyzed result of SRC (Table 4) of Bangladesh in respect with 9 other countries for 17 product categories of HS61 shows that higher competition exhibit with Italy and Indonesia. On the other hand, modest competition exhibit with China, Vietnam, and India. On the contrary, there exhibits complementariness in four remaining countries Mexico, Pakistan, Cambodia, and Sri Lanka.

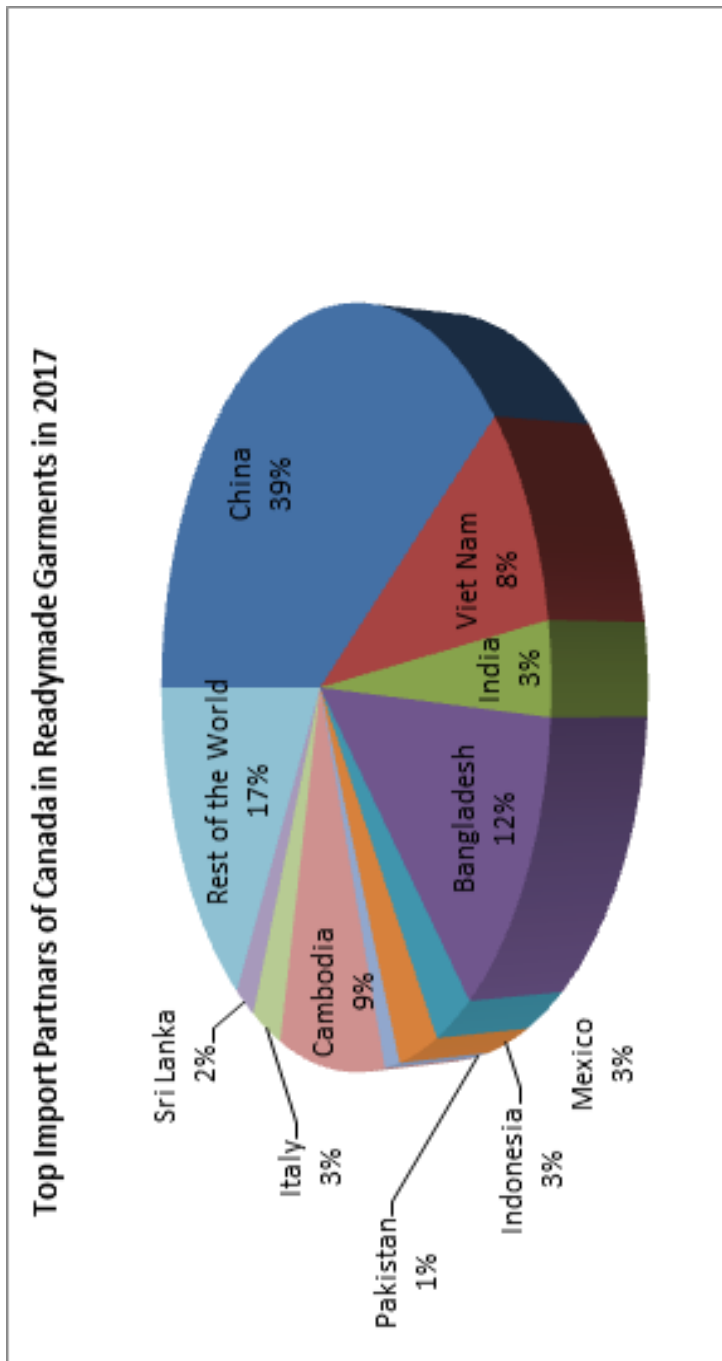

Equivalent Ad Valorem Tariff Faced by Individual Countries in Canadian Market in HS61 & HS62 influences the competition and growth of the readymade garments of Bangladesh in the Canadian market. Bangladesh enjoys "zero" Equivalent Ad valorem Tariff (Appendix 4, 5) along with Mexico, Cambodia, and Italy in Canadian market. So these 3 countries along with Bangladesh are relatively better position and it's a great opportunity for Bangladesh to utilize this prospect and confirm a stable and better place for RMG in Canadian market.

5. Conclusion and Policy Recommendations

In this research, the overall growth status and the competition of RMG industry in the Canadian Market have been explored at a deeper level for top 10 competitors in the Canadian market. The analyzed Export growth indices show that out of 17 product categories of HS61, Bangladesh revealed a positive export growth in 8 product categories and rest of the 9 product categories revealed a negative export growth in Canadian market. On the other hand, out of 17 product categories of HS62, Bangladesh showed a positive export growth in 9 product categories while 6 product categories showed a negative export growth in Canadian market, and rest 2 showed “zero” growth. Overall growth (mean) for HS61 shows a low positive growth but HS62 shows a negative growth for Bangladesh readymade garments in Canadian market. The general growth scenario of Bangladesh readymade garments in Canadian market is not highly promising and suggested a significant attention by the concerned stakeholders of the industry.

However, the Spearman's rank correlation coefficient (r_s) test for Bangladesh and the other top 9 competitors in the Canadian market for the 17 product categories of HS61 exhibited higher competition with Italy and Indonesia; modest competition with China, Vietnam, and India; trade complementarity with Mexico, Pakistan, Cambodia, and Sri Lanka. Moreover, the 17 product categories of HS62 exhibit higher competition with Italy and Indonesia; modest competition with China, Vietnam, and India; trade complementarity with Mexico, Pakistan, Cambodia, and Sri Lanka.

Even though Bangladesh's readymade garments is relatively in better position in Canadian market but the competition exist especially in the export growth. Special policies to improve the export growth, seize opportunities of “zero” Equivalent Ad Valorem Tariff, reduce political instability, transaction cost, skilled labor development, and upgradation of road, and port infrastructure to stay competitive in the readymade garments industry in Canadian market as well as in the whole world.

Appendix 1

Bu məqalə, Kanada bazarında Banqladeşin hazır geyim ixracatının genişlənməsi və rəqabət qabiliyyətinin artmasını 2013-2017-ci illər üzrə araşdırır. Tədqiqat nəticəsində, ixracatın böyümə indeksləri, HS61'in 17 məhsul kateqoriyası üzrə Banqladeşdə 8 məhsul kateqoriyasına uyğun müsbət ixracat artımının olduğunu və 9 məhsul kateqoriyasının geri qalanının Kanada bazarında ixracat artımının aşağı səviyyədə olduğunu ortaya çıxarmışdır.

Digər tərəfdən, Banqladeşin HS62 -17 məhsul kateqoriyası üzrə 9 məhsul üzrə müsbət bir ixracat artımı, 6 məhsul üzrə isə Kanada bazarında aşağı səviyyədə bir ixracat artımı göstərərək, "sıfır" indeksi üzrə inkişaf səviyyəsi araşdırıldı. Ayrıca, Kanada bazarındakı rəqiblər üçün Spearman'ın rütbə korrelyasiya əmsalı (rs) testi, HS61 Banqladeşin 17 məhsul kateqoriyası üzrə eyni zamanda İtaliya və İndoneziya ; Çin, Vyetnam və Hindistanla mütəmadi ; Meksika, Pakistan, Kamboca və Şri Lanka ilə daha çox rəqabət səviyyəsində olduğu tədqiq edilmişdir. Bundan başqa, HS62'- 17 məhsul kateqoriyası üzrə İtaliya və İndoneziya ilə rəqabət səviyyəsinin daha çox olduğunu göstərərək, Çin, Vyetnam və Hindistanla mütəmadi rəqabət; Meksika, Pakistan, Kamboca və Şri Lanka ilə rəqabətin tamamladığını ortaya çıxarıldı.

Eyni zamanda HS61 və HS62'də tək -tək ölkələrin qarşılaşdığı Ekvivalent Ad Valorem indeksinin Kanada bazarında hazır geyim məhsullarının rəqabət səviyyəsinə və inkişafına təsir etdiyi müşahidə edildi. Məqalə araşdırmalarına görə, geyim sənayesində və müvafiq ölkələrin bu sahədə maraqlarına uyğun olaraq, dünya bazarının bu istiqamət üzrə inkişafına çox təsir edəcəyi gözlənilir.

Açar sözlər: Hazır geyim, ixracat artımı, Kanada bazarı, rəqabət, Banqladeş

РЕЗЮМЕ

Рост сектора экспорта и подготовки конкурентоспособности на готовом рынке Бангладеша

В данной статье рассматривается Бангладешский экспорт готовой одежды и конкуренция в Канаде с другими ведущими конкурентами в 2013-2017 гг. В результате анализа индексы роста экспорта показывают, что 17 категорий продуктов HS61 имеют положительный рост экспорта в 8 категориях продуктов в Бангладеше, а остальные 9 категорий продуктов имеют отрицательный рост экспорта на канадском рынке. С другой стороны, одна из 17 товарных категорий HS62 Бангладеша, показала положительный рост экспорта в 9 товарных категориях, а шесть товарных категорий показали отрицательный рост экспорта на канадском рынке, в то время как две другие имеют нулевой рост.

Также, тест коэффициента ранговой корреляции (rs) Спирмена для конкурентов на канадском рынке показывает, что 17 категорий продуктов HS61 Бангладеша конкурируют с Италией и Индонезией, регулярно конкурируют с Китаем, Вьетнамом и Индией, а с Мексикой, Пакистаном, Камбоджей и Шри-Ланкой завершает торговлю. Кроме того, было установлено, что эквивалентный тариф Ad Valorem, с которым сталкиваются отдельные страны в HS61 и HS62, влияет на конкуренцию и рост готовой одежды на канадском рынке. Ожидается также, что полученные результаты помогут разработать и выстроить политику в швейной промышленности и соответствующих востребованных сферах в соответствующих странах.

Ключевые слова: готовая одежда, рост экспорта, Канадский рынок, конкуренция, Бангладеш
